

- TERRA FERRA

The Gamification Layer

Co-Design · Invite-to-Win · Style Battle

Where this layer fits

Gamification doesn't replace the pre-order journey — it wraps around it, adding engagement and acquisition loops at the points where attention is already high.

Three game mechanics plug in here → each is detailed on the following slides.

Working assumption The pre-order + virtual try-on flow shown here is the one we designed previously. If any step differs, the gamification hooks below adjust 1:1 — none of them change the core pre-order mechanics.

Three gamification scenarios

Two you defined, plus one we recommend — each targets a different stage of the funnel.

01

Co-Design

Designer publishes 3 versions. The audience votes and predicts the winner. Right guesses win a prize.

 **Co-create + hype**

02

Invite-to-Win

Inside the pre-order, consumers invite friends across IG, Facebook & TF. Every completed invite earns rewards.

 **Acquire — viral loop**

03

Style Battle

OUR RECOMMENDATION

Weekly UGC styling contest. Users style a featured item, the community votes, winners are featured.

 **Engage + traffic**

Design with the crowd — before you produce

HOW IT WORKS

- 1 Designer publishes 3 design versions of a product on Terra Ferra.
- 2 The audience votes and guesses which version will win — time-boxed campaign.
- 3 Every version has a virtual try-on, shareable inside TF only (co-creation exclusive).
- 4 When the timer ends, the designer chooses the version to produce.
- 5 Results are announced — fans who guessed right win a prize.
- 6 The winning product moves into the pre-order flow.

WHY IT WORKS

- Ownership: fans who help choose feel invested and pre-order at higher rates.
- Skin in the game: predicting a winner turns passive browsing into a bet worth returning for.
- Scarcity: the countdown and TF-only try-ons create urgency and exclusivity.

Try-ons stay inside Terra Ferra — keeping the co-creation unique to the platform and protecting unreleased designs.

Co-Design — in the app

App UI shown — the same flow ships on the web first (see platform rollout).

Vote + live standings

Three versions, real-time vote share, and a countdown.

Try on + lock your guess

Virtual try-on stays inside TF. Predict the winner to compete for the prize.

Who funds the prize? — our recommendation

A shared model. Terra Ferra guarantees a base reward for every campaign; the designer optionally adds a premium, money-can't-buy prize.

Platform base — TF

- Store credit, points, or a discount on this pre-order
- Consistent & scalable across every campaign
- Margin-friendly — it drives the very pre-order being promoted
- Low friction: fans always know a reward exists

Designer premium — optional

- Signed / 1-of-1 piece, exclusive colorway, name on the product
- "Money-can't-buy" prestige drives the most engagement
- Differentiates standout campaigns
- Designer controls cost & appetite per drop

How it splits

- Every correct guesser gets the TF base reward (credit or points).
- The designer's premium goes to a few top winners — e.g. the first correct guess, or a random draw among the correct guessers.
- Both TF and the designer are named as prize sponsors.
- Budgets stay capped — TF sets the base, the designer the premium — and are reviewed after early campaigns.

Turn every pre-order into a referral engine

HOW IT WORKS

1

Pre-order goes live; influencer publishes it with a virtual try-on.

2

The consumer creates their own virtual try-on of the product.

3

They invite friends — on Instagram, Facebook and inside Terra Ferra.

4

A friend completes the process (joins TF + places the pre-order).

5

The inviter earns points or gifts for every successful invite.

WHY IT WORKS

- Viral loop: each buyer becomes a channel, lowering blended acquisition cost.
- Both-sided reward: inviter and friend both win, lifting accept rates.
- Social proof: a friend's real try-on converts far better than an ad.

Builds directly on the existing pre-order flow — the fastest of the three to ship and the most measurable on CAC.

Invite-to-Win — in the app

App UI shown — the same flow ships on the web first (see platform rollout).

Share across channels

One tap to Instagram, Facebook or a TF link — carrying the user's own try-on.

Track invites & rewards

A reward ladder shows progress; points unlock at each completed invite.

Reward structure & guardrails

EXAMPLE REWARD LADDER

Completed invites	Inviter earns
1 friend	Free shipping + 150 pts
3 friends	€15 store credit
5 friends	Mystery gift / sample
10 friends	VIP early access to next drop

Friends also receive a welcome reward — both-sided incentives lift accept rates.

WHAT COUNTS — & ANTI-GAMING RULES

- “Successful invite” = friend creates an account AND places the pre-order (or pays the deposit).
- De-duplicate by payment method + device to stop self-referrals.
- Reverse the reward if the friend's order is cancelled or refunded.
- Cap rewardable invites per campaign to protect margin.
- Hold points until the pre-order clears its cancellation window.

Community styling contests — proven to drive traffic & sales

HOW IT WORKS

- 1 Each week a featured pre-order item gets a styling theme (e.g. “Golden Hour”).
- 2 Users style a look around it using real items from the TF catalog.
- 3 Looks are submitted to a public gallery — every item is shoppable.
- 4 The community votes; a live leaderboard ranks the entries (time-boxed).
- 5 Top looks are featured on TF; entrants earn points & a voter discount.

WHY IT WORKS

- Reuses the voting engine from Co-Design — low build cost.
- UGC = organic reach, shareable content and SEO traffic.
- Competition + leaderboard is a proven engagement driver.
- Shoppable looks convert directly — and fit TF's co-creation DNA.

Style Battle — flow & app

App UI shown — the same flow ships on the web first (see platform rollout).

- 1 Weekly theme drop
- 2 Style a look from the catalog
- 3 Submit to the gallery
- 4 Community votes (time-boxed)
- 5 Leaderboard ranks entries
- 6 Winners featured + shoppable

Build a look

Vote & leaderboard

Why these mechanics work — the proof

Gamification is well-established in fashion & retail. A few benchmarks from industry analyses:

~80%

of Sephora's annual sales
come from its tiered loyalty
members

20–30%

conversion lift from gamified
rewards vs. static discount
codes

+35%

repeat purchases for a fashion
brand using spin + streak
mechanics

+67%

more spend from loyal
customers than from new
ones

Map mechanic → outcome: Spin / scratch & referrals → acquisition. Points / tiers / streaks → retention. Quests / leaderboards / UGC → engagement.

Sources: industry analyses — Adjust, Odicci, BeyondCart, Aliapopups, Pimberly (2024–2026). Figures are directional benchmarks, not guarantees.

One loop, three on-ramps

The three scenarios feed one engagement loop. We recommend unifying them under a single points & tier system.

THE CASE FOR A LOYALTY META-LAYER

- Every action — voting, predicting, inviting, styling, buying — earns the same currency.
- Points unlock tiers (e.g. Insider → Maker → VIP) with early access and perks.
- Tiered loyalty is the single most proven retention driver in fashion (≈80% of Sephora's sales).
- It compounds all three scenarios into one habit, instead of three one-off promos.

What we'll measure

Each scenario has a primary funnel job — so each gets its own headline metrics.

Co-Design

CO-CREATE + HYPE

- Voters & guesses per campaign
- Try-on rate per version
- Voter → pre-order conversion
- Prediction accuracy & repeat play

Invite-to-Win

ACQUISITION

- Invites sent & accept rate
- Viral coefficient (K-factor)
- Completed referrals
- Referral CAC vs. paid CAC

Style Battle

ENGAGEMENT + TRAFFIC

- Entries & looks shared
- Votes & gallery dwell time
- Look → product click-through
- Shoppable-look conversion

Ship web first, then app

All three scenarios run on both web and app. We recommend launching each on the web first, then graduating to the app — winning discovery and conversion before deepening retention.

WEB — launch first

- No install needed — influencer & referral links open straight into the flow, lifting conversion.
- Pages are indexable: product, co-design and Style Battle pages earn organic SEO traffic.
- Visible to AI search & assistants — web content can be surfaced and recommended; in-app content can't.
- Open, shareable URLs power social posts, votes and public look galleries.

APP — layer on next

- Push notifications: drop reminders, vote-closing alerts, completed-invite nudges → retention.
- Native camera AR for a richer virtual try-on.
- Points wallet, streaks and saved looks build daily habit and loyalty.
- Higher repeat engagement and order value from signed-in users.

Web → App. Win discovery first — search, AI recommendations and social — then win retention in the app.

Open decisions & next steps

DECISIONS FOR YOU

- Co-Design prize: confirm the shared model (TF base + designer premium).
- Style Battle prize: TF-funded, brand-funded, or product giveaway?
- Referral reward budget, caps & the both-sided offer.
- Channel scope — keep sharing to IG, Facebook & inside TF only?
- Appetite for a unifying points & tier system.

SUGGESTED BUILD ORDER

Each scenario ships on the web first, then the app.

1

Invite-to-Win Extends the existing pre-order flow — fastest to ship, clearest ROI on CAC.

2

Co-Design Adds the voting + prediction engine and TF-only try-on publishing.

3

Style Battle Reuses the Co-Design voting engine for UGC — high traffic, low extra build.

4

Loyalty meta-layer Unify all three under points & tiers once the mechanics are live.
